Todays technology has taken out a lot of the creativity for the students because of the platforms being used, we NEED to throw the creativity back into the schools

SKILLS
LOADING ...

STUDENT Assumptions
- drag & drop, laid out steps, little chance of failure

- I think that digital skills are needed for future careers
- I have experiences the use of these skills within my own career
- students need to understand there is more beyond their assumptions
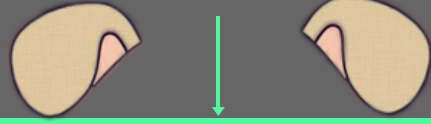

- ENCOURAGE STUDENTS TO BE MAKERS

Let's try something NEW.

1. Students believe that digital skills are important for future careers

4. We need to help students be makers/creators/speakers

I have seen myself that creativity is absent in the classroom & I strongly agree that leaving behind platforms can help the students creativity

Digital Ghosts in the Modern Classroom

2. Internet is full of websites that make is easier

- students are LOSING the discovery & exploration
- Platforms restrict the choices we have as users → filters on snapchat cannot be changed

Try Fail Try Again SUCCESS

3. shortcut template websites/platforms need to be left behind = increase in openess and experimentation

- Students expect linear, standard steps to follow and see hesitancy and trial and error

- I like that there are platforms out there to help in various ways
- I also understand how the creativity is being taken away for the students in the classroom
