

Everything is becoming a computer

Better yet, instead of making our systems vulnerable to plan for hacker attacks, we must make sure the systems are secure in the first place

4

Companies need to adhere to security and make it a priority for customers

3

Companies believe that complex systems are hard to secure because they are all interconnected

It's no longer about stealing private information to **ruin** your life, it's about stealing private information to **end** your life

We can no longer mandate that systems have easy access for the government to spy on users

2

The Internet is Coming
