

## Faculty of Nursing CPE

# Midterm Assessment

For Reem Boudali, by Jennie Trkulja

Submitted Nov. 28, 2022.

## Details

### **Summary of progress (Discuss concepts identified in the course, learning plan progress, skills)**

Reem is a very mature and highly knowledgeable individual. In meeting with Reem, she is energetic and enthusiastic about her placement. She has been able to work confidently and systematically through a head-to-toe assessment on various patients that she has taken care of and walks through a very detailed assessment including all avenues of diagnostics and care plans for patients. She is accurate in her assessments and can identify the diagnostics needed and why they would be ordered. Reem is very confident in her skills and abilities and can function in the department as a true asset. She has worked well with her preceptor and she has worked well with the other members of the team

Reem has worked on her CETs with good examples, working on her learning plan with two goals, the first goal relates to EKG which she has done as well as the code blue process. Reem is working on the core competencies of this course and highly succeeding. She is involved in getting report to giving reports at a change of shift, taking the lead, and using her preceptor only as a resource. She maintains a strong skill set but is focusing on her assessments and accurate interventions with proper evaluations.

Reem is demonstrating more than satisfactory level thus far at midterm with professionalism, safety, and using clinical judgment appropriately and timely. She has handed in both her journals which were well written

### **Strengths (Things you did well consistently):**

She is well organized, confident and maintains a high energy. Reem puts a great deal of work into her experience to gain the most from her placement. She listens to her patients, seeks out learnings and reviews what she doesn't know. She works and collaborates with her preceptor appropriately as well as the overall team in the ED. This would include physicians, RT's clerks, porters, families and patients alone. She has maintained a strong skill set and demonstrated a deep understanding of her assessments connecting with diagnostics and labs for the best patient outcome

**Areas for Improvement/Growth (Things you need to work on): Must be addressed in your learning plan for the next clinical experience**

Continue working through assessments and treatments. Keep taking initiative and reflecting on days practice to improve for the next day. Ask questions and observe any unfamiliar procedures which she has experienced already a fair amount  
Excellent job thus far!!
